BPAN-2016 control panel

BPAN-O-2016™ control panel specifications:
The control panel houses switch gears, fuses, and circuit breaker and SCR with current limit.

• Standard controller: UL/CE rated Programmable (PID) temperature controller.
  Featuring:
  1/16 DIN
  Digital display of setpoint and
  • Temperature control.
  • Adaptive tuning.
  • Programming capability: 1 program with 16 segments
  • Over temperature controller.

• MHI ST9001 single phase SCR
  • Advanced current limit
  • Soft start feature.

Wiring requirements: 120/220 volts single phase @ 50/60 Hz. 25Amp Max. Current. Maximum power output is 6kW (@220Volts).

Dimensions: 8” H x 19” W x 7” D
Weight (approx): 16lbs. (7.3kgs.)

BPAN-O-Plus-2016™ control panel specifications:
The control panel houses switch gears, fuses, and circuit breaker and SCR with current limit.

• Standard controller: UL/CE rated Programmable (PID) temperature controller.
  Featuring:
  1/16 DIN
  Digital display of setpoint and
  • Temperature control.
  • Adaptive tuning.
  • Programming capability: 1 program with 16 segments
  • Over temperature controller.

• MHI ST9001 single phase SCR
  • Advanced current limit
  • Soft start feature.

Wiring requirements: 120/220 volts single phase @ 50/60 Hz. 25Amp Max. Current. Maximum power output is 6kW (@220Volts).

Dimensions: 8” H x 19” W x 7” D
Weight (approx): 16lbs. (7.3kgs.)

Independent
Heater On and Off
The red and green off and on push buttons with LED light provide start and stop functions for the overall process by engaging or releasing the power contactor from the SCR. Please note: The panel and PID controller will remain on while no power output will be sent to the heating device.

Process Controller
A Proportional, Integral and Derivative (PID) programmable controller provides accurate monitoring and control via feedback from a temperature sensing thermocouple. Users can also visually monitor the program progression and temperature on the LCD display.

The controller communicates directly with the ST9001 SCR or equivalent located within the BPAN-2016 control panel. The ST9001 provides smooth power ramping and temperature transitions with built-in phase angle firing and current limit features. These features provide dynamic response for temperature accuracy.

*Over-Temperature Controller
(Offered with BPAN-O-Plus-2016) Provides secondary process and heater protection against temperature over-shoot and run-away.

Adjustable current limit/soft start
Field adjustable current limit feature to prevent over draw of amperage by heating elements.
