Micropyretics Heaters International, MHI Inc.

MHI has been in business for over 20 years with a stellar performance that encompasses at its core, the tradition of rapid invention and innovation/manufacturing for energy efficiency and environmental impact. MHI headquarters are located in Cincinnati, OH USA. Today the company exports products to over 25 countries world-wide and is one of the few Ohio companies with such an experienced innovation profile. MHI factories are located in Cincinnati and other cities. MHI has close to a thousand customers with good testimonials from all over the world particularly for service and after sales interactions. Over the years, MHI has grown vertically, making its own unique electronics, refractories, materials, controls, software systems, designs and components since 1996. It currently has an extremely versatile, modular platform of technologies and products from which new products and innovations are launched like the nanostructured heaters, one atmosphere superheated steam and Cascade e-Ion Plasma.

MHI Awards:

Governor's Award - Excellence in Energy Efficiency 1996

Ohio's Thomas Edison Program - Energy Technology Award 1999

R & D Award Best 100 Products 1999, 2001, 2004 and 2005

Entrepreneurial Excellence 2002/2003

Hamilton County Development Company - Business Development Award 2003

Fast 50 Award 2004

2005 Corporate Environmental Achievement Award of The American Ceramic Society

Cincy Business Manny Award 2007,

DOE American Invention 2020, T

Todd Portune Climate Savings Award 2022/2023

- Are you mission-ready for zero GHGs (greenhouse gas emissions), energy savings, water savings, and permanent metallic antimicrobial clean surfaces with MHI Inc.'s innovative, sustainable, and climate-responsibility solutions?
- Choose from **Airtorch®**, **MightySteam®**, or **Radiative Panels**. Ask MHI about compact electrical systems that offer energy-saving—units for KW to MW power use.
- Confidently hit your energy efficiency and deep decarbonization **targets** in energy-intensive industries. Leverage MHI's reputation for quality, reliability, and customer engagement for advanced technology products.
- Because of inherent sustainability, deep decarbonization and clean energy use are competitive **advantages**. MHI focuses on highly efficient, high emissivity, decarbonizing technologies to give you a competitive edge.

High-Pressure Electric Airtorch® Models. GTA and GVTA models with high-pressure enclosures.

Years of experience in MHI manufacturing and materials technology. **Large Customer Base.**

From KW to MW systems. High-pressure ASME-rated enclosures. CE or UL ratings as required.

Choose MHI **Airtorch®** Models when the requirement includes:

- High turn down
- High energy efficiency. At 900°C, what does the competition offer as a flow rate? At 1000°C? At 1100°C? At 1200°C?
- Very low-pressure drops
- Compact units
- Rapid heat-up and highly stable temperatures
- MHI uses patented nanostructure surface protections
- Unique HE designs for gases Hydrogen or Mono-Silane for the solar industry.
- High-quality torispherical terminations on pressure vessels.
- High damage tolerance.
- MHI Electric Airtorch® products offer multi-stage heating. Save substantial operating costs over gas heating.

Sometimes, the efficiency of electric Devices is far greater than that of fossil fuel-fired heat exchangers (compare 10 MW to 16 MW in one application).

Features for Comparison	MHI Airtorch®	Competitor	Why is it important to have a better-constructed unit? How do superior technologies impact a user?
	 www.mhi-inc.com	 COMPANY NAME	
Power: Is the derating of Power required in the Air or Gas heater during use?	No.	Varies could be derated by 20% typically.	Not requiring any derating is a clear advantage. When derated, the user can access only low powers for their application. Derating MW systems is a disadvantage tied to the cost of operation.
The typical powers offered to date by the manufacturer.	1KW - 45 MW in single units. Very versatile.	Generally, do not span this range for a single unit.	
Pressure drop for a high-temperature exit temperature.	Typically, 0.25 psi or as shown in the quote. The pressure drop is reported at the use temperature	Typically, four times more, ~1 psi, or as described by the manufacturer. Please ensure the pressure drop is reported at the use temperature.	A lower pressure drop is an indicator of less energy loss. It often determines the life of the heater. A lower-cost blower can be used when the pressure drop is low. Lower pressure drops are good for dusty gas.
Maximum exit temperature offered.	30°C to 1250°C depending on the model. (About 80°F to 2280°F)	Typically, only 30°C- 700°C. (About 80°F to 1300°F)	A higher temperature capability indicates a higher life even at a lower use temperature.
Electric Panel.	UL 508A or as required.	As listed (the user should inquire whether the entire panel is rated or only the enclosure is rated).	Safety Standards. It is best to follow known electrical codes.
Energy Efficiency.	Typically, 95% and above	Varies: Typically, ~80%.	A higher efficiency is better for process cost and decarbonization.
Does the shell require external insulation? Shell materials.	No. Shell is stainless steel or as requested.	Very often.	Better efficiency. Safety.
Can the shell be rated to ASME or CRN standards?	Yes.	Yes.	Ratings provide safety and uniformity.
SCR Quality and Flexibility for Current Limit?	Phase Angle or Zero Cross Over – software adjustable. The user has complete control.	Varies.	Phase angle and current limit adjustment provide better efficiency and better proportional control, making changes softer and thus improving life.
What is the size of a 1 MW 400°C (750°F heater)	About 24"	Generally, much larger	Compactness offers several advantages, from space to lower transportation and installation costs.
Torispherical terminations.	Yes, almost always.	Generally, it is not provided. Either no termination or Conical.	Pressure vessels commonly employ torispherical terminations.
Provision of Exact Mating Flanges and Pipes	Yes, almost always.	Varies	Ease of installation and compatibility.
The location of the exit process thermocouple.	Typically in the pipe tubing i.e., in the exit flow.	Generally located upstream near the radiator.	The reading should be in the flow when located in the pipe. This is more accurate.
What does the Warranty cover?	Depending on the model, MHI provides a 1-year Warranty on heaters. Not just on manufacturing defects.	Varies. It is unusual to have guaranteed life for heaters.	Quality and Technology is reflected in the Warranty. MHI uses the GAXP® patented long-life heaters.

OAB steam generator software control

Today, the need for high-quality, clean electric steam also encompasses zero emissions, high energy efficiency, and minimum spatial footprint configuration requirements. The MightySteam® and OAB® steam generators produce non-condensing steam above the inversion temperature. Because there are no liquid droplets, the steam is of high quality. This improves

Superheated Steam Products

DISCOVER MHI

OAB to HIGH TEMPERATURES, HIGH FLOW RATES and HIGH PRESSURES

MHI's OAB superheated steam boiler features patented InstaSteam™ technology, allowing for rapid startup times, unparalleled efficiencies and up to 1300°C temperatures. BoilerFree™ technology allows most OAB units to be installed without the need for traditional boiler certifications. The OAB is ideal for use as an industrial steam generator, for dewrinkling operations, superheated steam drying and dozens of other specific applications requiring a high efficiency boiler.

Pure Steam. Clean Steam. OAB generate superheated steam that is free of contaminants. The OAB's steam is ideal for pharmaceutical, cosmetics and other industries requiring the highest quality steam. OAB steam is also suitable for use as utility steam in many applications due to its high energy content.

Highly Scalable. OAB units can produce from 1 kg/hr to over 1000kg/hr. Modular design allows for easy upgrades and utilizing the unit where it is needed, all without routing steam or venting pipes.

Efficient. Boiler efficiencies improve when operated at lower pressures. Better conversion factors allow OAB units to use less resources to produce more steam. The OAB's rapid startup results in less energy used getting up to temperature, lower operating costs, less downtime and higher productivity. The output velocity of 550°C steam is almost 40m/s which is useful for uniform heating of kettles.

New flow at a higher stagnation pressure or velocity? Unique Nanostructured isenthalpic pressure enhancers for MHI.

STEAM FOR HIGH ENERGY SAVINGS PACKAGING

Whether for safety, aesthetics or combo-packaging, shrink-wrap is one of the fastest growing packaging solutions. However, shrink wrap traditionally has carried with it expensive energy and water usage. Now with the advent of OAB® steam it is possible that one may easily save 85-95% energy and water.

Rapid labelling even for filled bottles and for bottles with unusual curvature has never been easier. Move towards 90% savings in energy and water even with complex bottles.

Machines Specifications:

- 1 SW-OAB-12-300 - [Download Specs sheet](#) (For medium loads)
- 2 SW-OAB-4-550 - [Download Specs sheet](#) (For small loads)
- 3 Hybrid-SW OAB-12-300-4 [\(For high speed super saving loads\).](#)

MHI is a leader in hybrid designs for batch and continuous loads.

Tunnel Designs and Basic Tunnels are free with the OAB® System for CPG shrink wrap. For some models, the belt is provided at no charge.

- 1 Simple and Elegant. Multiple wall. Heat contained. Designed by thermal leader MHI. Simple lift off. Light weight.
- 2 Modular - Each Zone is three to five feet. Some basic tunnels and even belts are free.
- 3 Turn OAB® on and off . No need to idle. Move OAB® across various SW lines if required.
- 4 Easy adjustment by flaps and height adjusters for entire tunnel when required.
- 5 Intuitive Design - Graduated indicators simplify setups and adjustments.
- 6 Use with 12 kW OAB® steam. Overcome the energy disadvantage of traditional 150kW- 300 kW (15-30 BHP) Boilers. Reduce your cost per label.

Rapid Heat. Unparalleled Efficiency.

Cascade e-Ion Plasma™

Rapid 200°C per second heating rate with large aperture

Produces plasma plume containing ions, electrons, radiation and hot gas

Great for RTP (rapid thermal processing) applications. Ideal for thin film deposition and processing, heat treating, surface enhancing, brazing and a number of other processes

Capable of treating a variety of materials, including plastics, metals and a number of other surfaces.

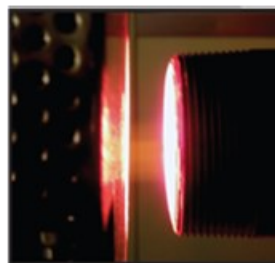

Silent operation

No combustion related residues, fumes or safety issues.

Energy efficient alternative to electron beam, lasers or induction.

High Temperature. High Quality. High Uniformity.

MHI furnaces meet the highest standards of quality, energy efficiency, and performance. From the laboratory scale Z-Series box furnace, robust motorized bottom-loading/opening furnace, to our novel steam furnaces with a rapid heat-up rate, MHI has a high temperature heating solution for even the most demanding user. From laboratory, lab scale, prototyping to large scale with established high safety heating devices, furnaces and refractories.

Furnace Products

DISCOVER MHI

High Temperature. High Quality. High Uniformity.

- **Safety:** Double walled Stainless Steel construction. This along with the FiberFree™ refractory allow for a safe exterior working environment (~50 °C or lower). MHI furnaces, where applicable, have three-arm balanced swing away doors that keep the hot surface side away from users.
- **Warranty:** Contact us to learn about the best warranty for your furnace.
- **High Temperature Furnace Classes:** Almost all MHI furnaces are lined with non-toxic FiberFree™ refractory in the furnace chamber. FiberFree™ refractory is a safe-to-use insulation which does not contain any toxic short fibers.
- **Non-sag roof technology:** MHI also uses the unique FiberFree™ refractory for the roof of most furnaces. This novel refractory does not crack during cycling at operating temperatures which allows for longer life of the furnace and longer life from the heating elements. Less cracks and longer life means you will be running your furnace for efficiently and have an overall savings (monetary, energy, replacement materials, etc.) This FiberFree™ material advantage is uniquely available from MHI.
- **Robustness:** MHI uses nanofractal roof hangers.
- **Unique Hearth Designs:** Several bottom loader type furnaces now have floors that come standard with removable hearths. On large bottom loading furnaces we have added a new design feature, which makes the already sturdy door-top fully removable and lockable. If you ever damage the floor of the door—simply change out this piece without incurring the larger cost for the entire door. Hearths can reach 2000 °C operating temperatures with the unique non-toxic FiberFree™ refractory.
- **Uniformity:** As high at +/- 2°C temperature uniformity for small chambers. Slightly more as the size increases. Uniformity is related to insulation quality and quantity, furnace design, best heating elements and high class control system that for example are easily accepted in US government laboratories. Overall care matters when mating ceramics, thick gauge stainless steel and high temperature heating elements. We often find MHI provides an additional layer of insulation compared to other manufacturers and provides the latest in feedback control electronics.
- **Our heating elements routinely outperform:** MHI offers the highest temperatures and longest life available in MoSi2 heating elements.
- **Awards:** MHI has received the prestigious R&D100 and other awards for its heating elements, refractory materials and furnaces. This shows our commitment to innovation and continuous improvement so that you have the highest quality and best performing furnaces.
- **Versatile:** MHI furnaces are used in diverse applications from chemical processing, vapor deposition, nano scale processing, materials processing and energy conversion from R&D to prototype to industrial scale operations.

Microheater™ Products

DISCOVER MHI

Small Size. High performance.

High power devices with minimal footprint.

Small heaters with temperatures up to 1900°C

High watt density allows for efficient heating in numerous applications.

Multiple configurations allow for easy integration into existing processes.

Excellent for Research and Development and Laboratories.

Suggested uses include: substrate heating, crucible heating and fiber heating amongst others.

RobustRadiator™ Products

DISCOVER MHI

Modular Heating. Highly Customizable.

MHI Patented MP1900 and MagnaCoil Heating Elements

Non-toxic, high performance FiberFree™ Refractory

May be operated in Vertical or Horizontal orientations

Fully Controllable

Optional Stainless Steel Casing for Easy Mounting

Customizable and Made-To-Order

Max Temperature 1400°C—1700°C

Fully controllable (BPAN-O-2014 Recommended)

Ideal for tube/pipe heating, annealing, wafer production, crystal growth, material testing, crucible melting and a variety of other R & D and production applications.

MagnaCoil™ Elements

DISCOVER MHI

High Performance. High Value.

MC-8/3/4/4 with CHS-OD

MC-8/1/4/4 with CHS-OD Coil
Spacer and Refractory

MagnaCoil™ heating elements offer temperatures up to 1450°C

Coil sizes range from 1" to 5"

Inline, Cross-line, in-plane and cross-line out of plane are the most popular configurations offered.

Coils feature high power handling and exceptional service lifespans.

Model	Coil In- side Di- ameter	Coil Length	Approx. Num- ber of turns	Max. Watts

GAXP™ Elements

DISCOVER MHI

High Performance. High Value.

U-Shaped Hairpin	Lu:	Le:	A:
Design Power in well insulated furnace	Le x 2 x 50W/inch		

Patented technology helps create highly efficient and reliable heating elements rated for use up to 1450°C.

Variety of shapes including U-Shaped hairpins, dumbbell and U-Shaped hairpin bent.

Dumbbell	Cz:	Hz:
Design Power in well insulated furnace	Hz x 50W/inch	

Compatible for use in a number of environments.

Use for oxidation, carbon reduction, neutral environments or in combustion processes.

Accessory Packages

DISCOVER MHI

Quicker Delivery. Less Downtime.

MHI offers the highest quality heating element accessories available to keep your furnace working at peak efficiency. MHI accessories are used for all MHI furnaces and many other modern high temperature furnaces, from small laboratory to production size furnaces. We also offer quick disconnect end caps for tube furnaces.

Full Accessory Kits

- Heating Elements
- Element Holders
- Connecting Wire
- Connecting Clips
- TC Extension Cable
- Replacement Ceramic
- Fan
- Alumina Tube
- Mullite Tube
- Metallic End Caps
- Ceramic End Caps
- Terminal Block
- Thermocouple
- Fuse

Controllers

DISCOVER MHI

Programmable Cycles. Remotely Locatable.

HIPAN-2014—XPAN-2014

BPAN-O-2014—BPAN-O-PLUS-2014

Electrical Panels controllers allow for better process control through the use of programmable steps and precise temperature controls. Most controllers include over-temperature controllers. Durable stainless steel enclosures.

Ability to locate controls remotely from device, allowing centralized control of multiple heating devices.

Single phase and 3 phase compatible models.

Helps improve energy use through more efficient temperature control.

MHI-DACS

DISCOVER MHI

Record Data. Improve Processes

DACS—Data Acquisition Control Software v7.2 for MHI Furnaces, Airtorch™ and other devices

MHI DACS1 and DACS2

- Do your projects faster. The MHI Data Acquisition and Control Software offers unparalleled control and data management.
- Remotely turn ON/OFF MHI devices.
- Easily download data, create cycle programs, provide graphical analysis and monitor and manage up to 12 MHI Heating devices.
- Fully programmable up to 16 programmable steps.
- Great for controlling multi-zone furnaces or multiple furnaces simultaneously.

DACS2

- Advanced built in data acquisition system combined with PID Control.
- Four universal inputs for data recording and two PID control loops with a full color 320x240 pixel graphic TFT display.
- Configurable real time views including horizontal and vertical trends, Horizontal and vertical bar graphs, alarm status and control loops.
- Optional Dual programmer supporting up to 100 programs with 25 segments each.
- Built in 50MB of non-volatile flash memory for data storage.
